

This site is the **single-page service console** of the GRNavi app. Among GRNavi's many features, it provides a driving video review function and a real-time road situation reporting service through a large web browser on your PC.

- If you record 4K UHD driving video with the GRNavi app and upload it to your YouTube account, you can enjoy a **review service with video and map synchronized** in [Global Life] inside the app and now on the web console.
- Upload your daily driving videos to your YouTube account and share them with the world through grnavi.com. It will help increase the number of views of your video.
- In the GRNavi app, drivers can currently **report 18 warning situations**, which are then disseminated in the form of notifications within the reported country. Notifications are delivered via standard push messages and **guaranteed real-time reception to drivers** running the app and web service console.

Users who log in through the app have no restrictions. Please log in through the app first. You can find it by searching for **grnavi** in the Play Store.
